Gedruckt bei Hammerich & Lesser in Altona.

Jahrgang 1896.

I. Theil: Meteorolog. Beobachtungen in Deutschland, angestellt an 10 Stationen II. Ordnung; Jahres-Resultate von 10 Stationen II. Ordnung. Fünftägige Wärmemittel. Niederschlagsmengen an der Deutschen Küste (Monats- und Jahresresultate).

II. Theil: Stündliche Aufzeichnungen der autographischen Apparate für Luftdruck, Temperatur, Windrichtung und Windgeschwindigkeit an den Normal-Beobachtungs-Stationen der Deutschen Seewarte zu Hamburg, Wustrow, Memel und Borkum.

III. Theil: Zur Statistik der Stürme an der Deutschen Küste.

Anhang: Gesammtinhalt des Deutschen Meteorologischen Jahrbuchs für 1896.

Vorwort.

Das Vorwort zum Jahrgang X dieser Publikation verbreitete sich im Einzelnen über alles das, was mit der Entwicklung der Herausgabe deutscher meteorologischer Beobachtungen seit 1876 im Zusammenhange steht; es mag deshalb im Wesentlichen darauf verwiesen und hier nur das berührt werden, was eine unmittelbare Beziehung zum vorliegenden Bande hat. Wir entnehmen jenem Vorworte daher mit entsprechender Abänderung die nachfolgenden Bemerkungen.

Da die Herausgabe der »Meteorologischen Beobachtungen in Deutschland« durch Beschluss deutscher Meteorologen und Vertreter meteorologischer Institute in Deutschland im Jahre 1876 erfolgt war, so konnte dieselbe nicht ohne Weiteres sistirt werden, vielmehr wurde es für erforderlich erachtet, einen Beschluss der nun vollzählig vertretenen Institute herbeizuführen, was durch eine bei Gelegenheit der Jahresversammlung der Deutschen Meteorologischen Gesellschaft in Karlsruhe zusammenberufene Konferenz der Vorstände der meteorologischen Institute in Deutschland im April 1887 auch bewirkt worden ist. War man auf dieser Konferenz sich darüber einig, dass eine Herausgabe der Meteorologischen Beobachtungen in Deutschland hinfort seitens der einzelnen Institute zu erfolgen habe, so war man auch überzeugt, dass das einheitliche Band für diese Veröffentlichung sich nicht lösen dürfe und durch ein äusseres Zeichen fernerhin gewahrt bleiben müsse. In diesem Sinne wählte man die allen einzelnen Veröffentlichungen gemeinsame Ueberschrift **„Deutsches Meteorologisches Jahrbuch“**, zu welcher noch das Land oder das System hinzugefügt werden sollte. Als Zeitpunkt für den Beginn der neuen Publikation setzte die Konferenz den 1. Januar 1887 fest. Ferner erschien es wünschenswerth, dass die einmal errungene Zusammengehörigkeit dadurch gewahrt bleiben sollte, dass der Veröffentlichung der Deutschen Seewarte die Inhalts-Verzeichnisse auch der Veröffentlichungen der übrigen Deutschen Institute einverleibt würden; es war dies um so empfehlenswerther, als durch ein solches Verfahren die bibliographische Uebersicht deutscher meteorologischer Publikationen sehr erleichtert werden konnte. Diesem Verzeichniss wurde bereits im vorigen Jahrgang eine Zusammenstellung analoger, privater Veröffentlichungen zugefügt.

Der nun der Oeffentlichkeit übergebene Band **„Deutsches Meteorologisches Jahrbuch für 1896, Beobachtungs-System der Deutschen Seewarte“** ist nach den im Vorstehenden niedergelegten Gesichtspunkten zusammengestellt und erscheint als Jahrgang XIX. Um nun auch die beiden Jahrgänge 1876 und 1877 in die Serie mit einzuschliessen, wurde der Bezeichnung und Nummerirung noch hinzugefügt: »Einundzwanzigster Jahrgang der Meteorologischen Beobachtungen in Deutschland«.

Die Einleitung zu dem vorliegenden Bande enthält das Wesentlichste zum Verständnisse der in demselben niedergelegten Resultate.

Die Bearbeitung der Registrir-Aufzeichnungen von sämmtlichen Stationen wurde auch für diesen Jahrgang durchgeführt, doch konnten dieselben nur in beschränktem, wenn auch gegen den vorigen Band etwas erweitertem, Umfange aufgenommen werden.

Hamburg, im Dezember 1897.

Die Direktion der Seewarte.

Dr. *Neumayer.*

Einleitung.

Der vorliegende Jahrgang »Deutsches Meteorologisches Jahrbuch für 1896, Beobachtungs-System der Deutschen Seewarte« (neunzehnter, beziehungsweise einundzwanzigster Jahrgang der Publikation »Meteorologische Beobachtungen in Deutschland«) unterscheidet sich vom vorigen Jahrgange nach seinem Inhalt nur durch die Aufnahme der dreimaltäglichen Beobachtungen von Rügenwaldermünde, sowie der Aufzeichnungen des Anemographen und Barographen von Borkum. Eine Aenderung in der Anordnung und Bearbeitung des Stoffes hat nicht stattgefunden.

Auch seit Einführung der Mitteleuropäischen Zeit in Deutschland am 1. April 1893 werden die dreimaltäglichen Beobachtungen an den Normal-Beobachtungsstationen und Signalstellen der Seewarte wie früher nach Ortszeit angestellt, wie auch die Registrir-Apparate unverändert der Ortszeit folgen. Es bedeuten demnach in den Ueberschriften des I. Theiles 8^a, 2^p, 8^p und die hierfür in den Bemerkungen benutzten Zeichen I II III (diese ebenfalls im III. Theil) die genannten Stunden nach Ortszeit, das Gleiche gilt von den Zeitangaben der Ueberschriften im II. Theile, während die übrigen, im Text enthaltenen Zeitangaben sich durchweg auf M. E. Z. beziehen. Auf Seite VII findet sich bei den Stationen angegeben, um wieviel Uhr M. E. Z. die Morgenbeobachtung (8^a oder I) angestellt wird.

In Folge falscher Auffassung der betreffenden Verfügung wurde indessen am 1. April 1893 in Keitum und Rügenwaldermünde durchweg auf M. E. Z. übergegangen, sodass die Termin-Beobachtungen wie die Registrirungen in der Zeit falsch orientirt waren, in Keitum bis zum 2. Juli 8^a 1894, in Rügenwaldermünde bis zum 18. August 1894. Ebenso ist auf einer grossen Zahl von Signalstellen irrthümlicher Weise längere Zeit um 8^a, 2^p, 8^p M. E. Z. beobachtet worden.

In Bezug auf die Ausrüstung der Stationen, die Aufstellung der Registrir-Apparate, die Bearbeitung der Beobachtungen und Registrirungen etc. sei insbesondere auf die Einleitung zu dem Jahrgang 1889 verwiesen, indem folgend nur die zum Verständniss wesentlich erscheinenden Angaben Wiederholung gefunden haben.

Auf den Normal-Beobachtungs-Stationen und der Ergänzungs-Station Rügenwaldermünde trat keinerlei Aenderung ein.

Die Wechsel der Vorsteher der Signalstellen sind aus der Zusammenstellung der Beobachter auf Seite VII zu ersehen.

Im Jahre 1896 wurden die Stationen der Seewarte inspizirt in Swinemünde, Wustrow, Marienleuchte, Cuxhaven, Keitum, Brake, Schillighorn, Nesserland-Schleuse und Borkum.

Für Hamburg ist besonders hervorzuheben, dass die im Jahre 1893 begonnene Umgestaltung des der Seewarte benachbarten Gebietes des früheren Elbparkes im Jahre 1896 beendigt wurde.

I. Theil.

Der von der Seewarte angenommene Normalstand des Barometers ist am 1. Januar 1887 um 0.46 mm erniedrigt worden, in dieser Publikation jedoch schon im Jahrgang 1886 (s. dort Seite IV) dem I. Theil zu Grunde gelegt worden, sodass die Barometerstände seitdem um 0.46 mm niedriger als früher erscheinen.

Bei Gelegenheit der Inspektion der Stationen im Jahre 1896 wurden die Barometer und Thermometer an den Normal-Beobachtungs-Stationen in Swinemünde, Wustow, Keitum und Borkum und an der Ergänzungs-Station in Cuxhaven mit Reise-Instrumenten verglichen. Es ergab sich keine erhebliche Aenderung der zu den Ablesungen dienenden Instrumente.

Die absolute wie die relative Feuchtigkeit werden nach den Angaben des Psychrometers den Tafeln von Jelinek ohne weitere Korrektion entnommen.

Die Extrem-Thermometer werden beide bei der Morgenbeobachtung abgelesen und für den laufenden Kalendertag eingetragen, sodass die Maximum-Temperaturen in den Tabellen meist um einen Tag vorwärts verschoben erscheinen. Eingestellt werden das Maximum-Thermometer bei der Morgen-, das Minimum-Thermometer bei der Nachmittags-Beobachtung, sodass je die niedrigste Temperatur des Zeitraumes von 2^p bis 8^a, also von 18 Stunden, beobachtet wird. In den Monatstabellen werden die Angaben der Extrem-Thermometer durchweg mittelst der Termin-Beobachtungs-Temperaturen kontrollirt und bei gelegentlichen Widersprüchen durch die betreffenden mehr extremen Ablesungen am trockenen Thermometer ersetzt.

Die Windrichtungen werden nach der sechzehntheiligen Windrose rechtweisend notirt, die Windstärken nach der Beaufort-Skala (0—12) geschätzt.

Die Bewölkung wird nach den Zahlen 0—10 geschätzt, wo 0 einen wolkenlosen, 10 einen ganz be-eckten Himmel bezeichnet, ohne dass auf die scheinbare Dichtigkeit der Wolkendecke Rücksicht genommen wird. ›ie blosse Angabe ≡ (Nebel) bedeutet, dass sich der Beobachter zu der angegebenen Zeit wirklich im Nebel befand.

Das dem Regenmesser von 500 qcm Oeffnung beigegebene Messglass lässt Zehntel-Millimeter ohne chätzung ablesen; der Niederschlag wird um 8^a und 8^p gemessen und die tägliche Niederschlagsmenge gleich er Summe der am Abend des laufenden und am Morgen des folgenden Tages gemessenen Niederschläge be-:chnet. Für beobachtete, aber unter 0.1 mm bleibende Niederschläge ist in der Niederschlags-Kolumne 0.0 gesetzt.

In den mit »Bemerkungen« überschriebenen Spalten des I. Theiles (S. 1—60) und ebenso in den Jahres-usammenstellungen (S. 62—66) bedeutet das Zeichen ⌐ш für Memel, Keitum, Neufahrwasser und Rügenwaldermünde, ass zu den angegebenen Zeiten, bezgl. an den gezählten Tagen mit ⌐ш, der Wind nach Schätzung die Stärke 8 er B.-Sk. erreichte, für die übrigen Stationen jedoch, dass stürmische Winde durch die Anemometer angezeigt urden, indem die Windgeschwindigkeit in den Stundenmitteln die, wesentlich von der Aufstellung der Anemometer bhängige, Sturmnorm erreichte. Als diese, den Eintritt stürmischer Witterung charakterisirenden stündlichen Wind-eschwindigkeiten wurden die von Herrn Prof. van Bebber ermittelten Zahlen zu Grunde gelegt, welche im XIV. Jahrgange »Monatsberichte der Deutschen Seewarte, 1889« im Beiheft II, Seite 9, berechnet wurden, nämlich

für Borkum....... 21 m pro Sek.	Hamburg 15 m pro Sek.	Wustrow...... 15 m pro Sek.
« Wilhelmshaven 16 » »	Kiel.... 15 » »	Swinemünde.. 13 » »

Die an der genannten Stelle auch für Memel und Keitum abgeleiteten Sturmnormen haben wegen ver-nderter Aufstellung der Anemometer auf diesen Stationen ihre Bedeutung verloren; es liegen noch nicht genügend ange Registrirungen zur Berechnung der neuen Werthe vor, so dass für Memel und Keitum, wie auch für Neu-ahrwasser und Rügenwaldermünde, wo kein Anemometer funktionirte, die oben hervorgehobene Abweichung geboten war. Wo auf den übrigen Stationen Anemometer-Registrirungen ausfielen, findet sich eine betreffende Angabe am Fuss der Monatstabelle; auch in diesem Falle musste die Schätzung von ⌐ш an Stelle der Registrirung :reten. In den Jahres-Zusammenstellungen sind in solchem Falle die Zahlen der Tage mit ⌐ш kursiv gedruckt.

Die in dem Werke gebrauchten Abkürzungen und die den Kongress-Beschlüssen entsprechenden Zeichen sind die folgenden:

ab. = abends, mg. = morgens,
tg. = tags, mtg. = mittags,
a. resp a. m. = vormittags,
p. resp. p. m. = nachmittags,
^{a} und ^{p} — als Exponenten bei der Tagesstunde — Abkürzung für a. m. und p. m.
0^p resp. 12^a = Mittag,
0^a resp. 12^p = Mitternacht,
n. = in der (**vorhergehenden**) Nacht,
I, II, III bedeuten die Zeit der Terminbeobachtungen, resp. 8^h a. m., 2^h p. m. und 8^h p. m. Ortszeit (vgl. S. IV.)

● Regen,
✳ Schnee,
✢ Schneegestöber,
▲ Hagel,
△ Graupeln,
≡ Nebel,
⌓ Thau,
⊔ Reif,
V Duftanhang, Rauhfrost,
∞ Dunst (Höhenrauch ist nicht durch ein Zeichen ersetzt worden),
⌒ Nordlicht,

← Eisnadeln,
∾ Glatteis,
⌐ш starker Wind (vgl. oben),
< Wetterleuchten,
T Donner,
ꞁ< Gewitter,
⏀ Sonnenhof,
⊕ Sonnenring,
⊍ Mondhof,
⊎ Mondring.

Die weitere Zeitangabe „früh" bezeichnet eine Zeit vor 8^h morgens und im Allgemeinen einen früheren Zeitpunkt als die Zeitangabe „*a*", ebenso wie in Folge der Benutzung der Zeitangabe „ab." (und Mittag = mtg.) die Bezeichnung „*p*" durchschnittlich eine frühere Nachmittagszeit (etwa $2-5^p$) als die Abendstunden angiebt.

In den **Jahres-Zusammenstellungen** sind die mittleren monatlichen Temperaturen für die Monate Mai bis August nach der Formel $\frac{1}{4}(8^a + 8^p + \text{Max.} + \text{Min.})$, für Septbr. bis April nach der Formel $\frac{1}{2}\left(\frac{8^a+8^p}{2} + \frac{8^a+2^p+8^p}{3}\right)$ berechnet, während den fünftägigen Temperaturmitteln die Formel $\frac{1}{2}(8^a+8^p)$ zu Grunde liegt. Die übrigen Mittelwerthe sind als arithmetische Mittel aus den Terminmitteln abgeleitet.

Die für 760 mm gegebene Schwerekorrektion dient zur Reduktion auf die Schwere im Meeresniveau in 45° Breite (vgl. Einleitung des IX. Jahrganges, 1886, S. III.)

Es bedeuten H, h_t und h_r die Höhen des Barometers über dem mittleren Meeresspiegel, der Thermometer und der Oeffnung des Regenmessers über dem Erdboden.

Als Zahl der Tage mit Niederschlag (Kolumne ●, ✳, ▲, △) sind, wie schon im vorigen Jahrgang, alle Tage gezählt, an denen der Niederschlag im Regenmesser $\geq$0.2 mm war, unabhängig von seiner Herkunft. Die Zahl der Tage je mit ✳, ▲ und △, T und ꞁ<, ≡ sowie mit ⌐ш, dessen Bedeutung sich oben (S. V) erläutert findet, wurde gleich der Zahl der Reihen, in denen diese Zeichen in der Rubrik »Bemerkungen« vorkamen, angenommen. Neben diesen Häufigkeitszahlen für ⌐ш wurden bei den mit Anemograph ausgerüsteten Stationen, für die die Sturmnorm bekannt ist (s. oben), noch die Zahlen der weiteren Tage, an denen stürmische Winde (mehr böigen Charakters) eintraten, ohne dass jene Sturmnormen erreicht wurden, in Klammern beigefügt.

In der Tabelle der Niederschlagsmengen, S. 62, wurden die Messungen an den Normal-Beobachtungs-Stationen und in Rügenwaldermünde wegen Raummangels nicht wiederholt und aus gleichem Grund die Signalstelle in Ahlbeck und Brunshausen weggelassen.

II. Theil.

Bezüglich der Art und Aufstellung der Registrir-Apparate, sowie der Bearbeitung der Registrirungen, se auf die Einleitung zum Jahrgang 1889 (S. VII—VIII) verwiesen.

In den Anemometer-Tabellen beziehen sich die angegebenen Windrichtungen auf den im Kopf an gegebenen Zeitpunkt, und es bedeuten die Geschwindigkeiten die Durchschnittswerthe der beendeten Stunde. Von dem Anemometer in Memel wurden die Windrichtungen mangelhaft registrirt.

Die im Druck vorliegenden Registrirungen des Thermographen in Hamburg wurden wiederum dem Thermographen Hipp, der sich vor einem Nordost-Fenster im Erdgeschoss der Seewarte in der Nähe des Thermometergehäuses befindet, entnommen, während die Registrirungen eines gleichartigen, in einer Wild'schen Hütte im Garten der Seewarte über dem Reservoir aufgestellten Thermographen bei Ausfall von Registrirungen des erstgenannten Instruments benutzt wurden. (Vgl. Einleitung zu Jahrgang 1889, S. VIII.)

III. Theil.

Die seit dem Jahre 1878 eingeführte Sturmstatistik wurde auch in diesem Jahre, analog den früheren Jahrgängen, für die deutsche Nordsee- und Ostseeküste durchgeführt.

Von den Signalstellen wurde bei dieser Bearbeitung wie früher nur Altona, der Nähe Hamburgs wegen, ausgeschlossen. Hinzu traten die im Laufe des Jahres in Munkmarsch auf Sylt und in Brunsbüttel an der Westmündung des Kaiser Wilhelm-Kanals errichteten Signalstellen.

Nur solche Fälle wurden hier zur Veröffentlichung gebracht, in denen stürmische Winde auf grösserem Gebiete mindestens an drei Stationen auftraten.

Die neben den Stationsnamen stehenden, auch in den Bemerkungen angewandten und durch den Druck hervorgehobenen arabischen Zahlen geben das Datum an.

Die Bewölkung wird durch die Ausfüllung der Kreise bezeichnet, wie dieses auch in den synoptischen Karten der Seewarte geschieht:

○ = wolkenlos,	◕ = wolkig,
◔ = heiter,	● = bedeckt,
◑ = halb bedeckt,	

und entsprechend wurden für Regen, Schnee etc. die auf S. V angegebenen Zeichen neben diese Kreise gesetzt.

Die eingeklammerten Zahlen neben der Bewölkung bezeichnen den Seegang und zwar:

0 = schlicht,	5 = ziemlich grobe (unruhige) See,
1 = sehr ruhig,	6 = grobe See,
2 = ruhig,	7 = hoch,
3 = leicht bewegt,	8 = sehr hoch,
4 = mässig bewegt,	9 = äusserst (gewaltig) hoch.

Die Bedeutung der Abkürzungen und der den Kongress-Beschlüssen entsprechenden Zeichen ist oben in den Erläuterungen zum I. Theil auf S. V angegeben.

Der im Anhang gegebene Gesammtinhalt des Deutschen Meteorologischen Jahrbuchs für 1896 enthält als Erweiterung noch die Inhaltsangabe des Jahrbuchs der städtischen meteorologischen Station I. Ordnung zu Aachen für 1896 und als Nachtrag diesen für 1895.

Geographische Lage der Normal-Beobachtungs-Stationen und von Rügenwaldermünde. Höhe der Barometer über dem Meer *(H)*, sowie der Thermometer und Oeffnung der Regenmesser über dem Erdboden (h_t, h_r).

Jahr 18 (1)

Anhang.

Gesammtinhalt des Deutschen Meteorologischen Jahrbuchs

für 1896.

Beobachtungs-System des Grossherzogthums **Baden.**

(II. Theil vom »Jahresbericht des Centralbureaus für Meteorologie und Hydrographie im Grossherzogthum Baden mit den Ergebnissen der meteorologischen Beobachtungen und der Wasserstands-Aufzeichnungen am Rhein und an seinen grosseren Nebenflüssen für das Jahr 1896.«)

Beobachtungs-System des Königreichs **Bayern.**

(Beobachtungen der meteorologischen Stationen im Königreich Bayern, XVIII. Jahrgang.)

(Ein Inhalts-Verzeichniss ist vor Abschluss des Druckes nicht eingegangen.)

Beobachtungs-System des Königreichs **Preussen** und benachbarter Staaten.

(Veröffentlichungen des Königl. Preuss. Meteorolog. Instituts, herausgegeben durch dessen Direktor W. von Bezold: Ergebnisse der Beobachtungen an den Stationen II. und III. Ordnung im Jahre 1896. Von Prof. Dr. V. Kremser.)*)

*) Nachstehendes Inhalts-Verzeichniss ist nur als ein vorläufiges anzusehen.

III. Besondere Zusammenstellungen.

tage, Frosttage, Sommertage.
›st- und Schneegrenzen.
nftägige Temperaturmittel.
›weichungen der fünftägigen Temperaturmittel vom 35jährigen Durchschnitt.
:bersicht über die Temperatur-Verhältnisse (Mittel, absolutes Maximum und Minimum in den einzelnen Monaten und im Jahr).
:bersicht über die wichtigsten Jahresresultate an den Stationen II. Ordnung.

IV. Sonstige Beobachtungen.

ug der Cirruswolken an den Stationen Marggrabowa, Thorn, Habelschwerdt, Celle, Erfurt, Von der Heydt-Grube.
onnenscheindauer zu Berlin (Seestrasse), Blankenburg b. Berlin, Breslau, Brocken, Celle, Dirschau, Ellewiek, Emden (Nesserland), Erfurt, Geisenheim, Harzgerode, Helgoland, Jena, Inselsberg, Kassel, Kiel, Kolbergermünde, Leobschütz, Marburg, Marggrabowa, Meldorf, Niesky, Poppelsdorf bei Bonn, Potsdam, Rostock, Samter, Schlanstedt, Uslar.
Stündliche Werthe der Bewölkung in Görlitz.
Stündliche Werthe der Windgeschwindigkeit zu Berlin.
Stündliche Werthe der Windrichtung und Windgeschwindigkeit zu Erfurt, Kassel und Ostrowo.
Stündliche Werthe der Temperatur zu Königsberg i. Pr. und Uslar.
Dreimal tägliche Niederschlags-Beobachtungen von 56 Stationen.

Berichtigungen.
Verzeichniss der Publikationen des Kgl. Preuss. Meteorolog. Instituts.
Inhalts-Verzeichniss.

Ausserdem erschienen als besondere Veröffentlichungen:
1) Bericht über die Thätigkeit des Kgl. Preuss. Meteorolog. Instituts.
2) Ergebnisse der Niederschlags-Beobachtungen.
3) Ergebnisse der Gewitter-Beobachtungen.
4) Ergebnisse der meteorologischen Beobachtungen in Potsdam.
5) Ergebnisse der magnetischen Beobachtungen in Potsdam.

Beobachtungs-System des Königreichs Sachsen.

(Jahrbuch des Königl. Sächsischen meteorologischen Institutes für 1896, Jahrgang XIV der neuen Reihe.)

I. Abtheilung.

Beobachtungen im Jahre 1896 an den 12 Stationen II. Ordnung: Leipzig, Dresden, Colditz-Zschadrass, Bautzen, Zittau, Chemnitz, Plauen, Freiberg, Schneeberg, Altenberg, Reitzenhain und Fichtelberg.

II. Abtheilung.

Beobachtungen im Jahre 1896 an der Station I. Ordnung Chemnitz-Schloss.
Stündliche Werthe des Luftdrucks, der Lufttemperatur, der Dunstspannung, der relativen Feuchtigkeit, der Thaupunkts-Temperatur, des Sättigungsdeficits, der Richtung und Stärke des Windes, sowie der Bewölkung mit Angaben über Sonnenschein und Niederschlags-Verhältnisse in Chemnitz.
Stündliche Niederschlagsmengen.
Dauer des Sonnenscheins.
Tägliche vergleichende Niederschlags-Messungen, Temperaturen des Erdbodens in 1 m Tiefe und an der Oberfläche und Verdunstungsgrössen in Chemnitz für das Jahr 1896.
Monats- und Jahresresultate aus Vorstehendem.

Tafel I: Besonders auffallende Baro- und Thermogramme im Jahre 1896.
Tafel II: Besonders hervorragende Niederschläge im Jahre 1896.

III. Abtheilnng.

Bericht über die Thätigkeit im meteorologischen Institute für das Jahr 1896. Erstattet vom Direktor Prof. Dr. Paul Schreiber. Mit 2 Anlagen.
Anlage I: Verzeichniss derjenigen Behörden, wissenschaftlichen Anstalten und Gelehrten, von denen die Bibliothek des meteorologischen Institutes im Jahre 1896 Zusendungen erhalten hat.
Anlage II: Verzeichniss der Stationen des meteorologischen Instituts im Jahre 1896 mit Angabe ihrer Ordnung, Lage, Höhe und Namen der Beobachter.

Anhänge.

Anhang I: Die Hauptergebnisse an allen Stationen im Jahre 1896.
Anhang II: Die Hauptergebnisse der Verdunstungsmessungen im Jahre 1896 an den Stationen Dresden-Neustadt, Chemnitz und Jahnsgrün.
Anhang III: Hauptresultate aus den Wasserstands-Beobachtungen im Jahre 1896.
Anhang IV: Die Gewitter- und Hagelforschungen im Jahre 1896.
Anhang V: Die Schneetiefen-Messungen im Winter 1896/97.
Anhang VI: Die Ergebnisse der phänologischen Beobachtungen im Jahre 1896.

Beobachtungs-System des Königreichs Württemberg.

(Meteorologische Beobachtungen in Württemberg im Jahre 1896.

Einleitung.
Stationen und Beobachter.
Witterungsverlauf.
Abweichungen der Temperaturmittel aller Hauptstationen von den normalen Werthen.
Vergleichung der Stuttgarter Ergebnisse mit denen früherer Jahre.
Tägliche Beobachtungen von Stuttgart und von Hohenheim.
Windbeobachtungen von Hohenheim, stündliche Angaben.
Stündliche Regenmengen während der Sommermonate in Hohenheim.
Sonnenschein-Messungen von Biberach, Hohenheim, Stuttgart u. Wildbad.
Tagesmittel der Temperatur in Stuttgart.
Fünftägige (Pentaden-) Mittel der Temperatur von allen Hauptstationen.
Ergebnisse der 23 Hauptstationen: Altshausen, Baldern, Bausteiten, Biberach, Böttingen, Calw, Dobel, Freudenstadt, Friedrichshafen, Gaildorf, Heidenheim, Heilbronn, Hohenheim, Isny, Kirchberg, Kirchheim, Mergentheim, Rottenburg, Schopfloch, Stuttgart, Ulm, Wildbad, Zeil.
Ergebnisse der Regenstationen.
Sommer-, Frost- und Wintertage an den Hauptstationen.
Frost-, Schnee- und Gewittergrenzen, Grenzen der Sommer- und der Wintertage an den Hauptstationen.
Gewitter-, Hagel- und Graupelnfälle an den Hauptstationen.
Bodentemperatur in Stuttgart.
Erscheinungen aus dem Pflanzenreich, Mittelwerthe.
Erscheinungen aus dem Pflanzenreich, Einzelbeobachtungen.
Die Bewölkungs-Veränderung von Hohenheim von Tag zu Tag.
Die stündlichen Aufnahmen von Biberach.

Beilagen: Jahres-Isothermen und Jahres-Isohyeten von 1896.

Beobachtungs-System des Reichslandes **Elsass-Lothringen.**

(Meteor. Jahrbuch für Elsass-Lothringen, VII. Jahrgang 1896.)

Einleitung.
Stationsbeschreibung.
Stündliche, beziehungsweise zweistündliche Beobachtungen der meteorologischen Station in Strassburg und zwar:
- a) des Luftdrucks,
- b) der Temperatur in der Nähe des Erdbodens und in der Höhe der Münsterspitze, 140 m über dem Erdboden,
- c) der Bewölkung, beobachtet auf der Plattform des Münsters.

Tägliche Beobachtungen der Station II. Ordnung: Strassburg (Plattform des Münsters), sowie der korrespondirenden Gipfel- und Thalstation Grosser Belchen und Mülhausen.
Monatliche und Jahres-Resultate der 12 Stationen II. Ordnung: Strassburg, Rothau, Colmar, Münster, Mülhausen, Drei Aehren, Weisser See, Grosser Belchen, Metz, Gondrexange, Château Salins und Saargemünd, sowie der 3 forstlich meteorologischen Stationen Hagenau, Neumath und Melkerei und von ca. 60 Regenstationen.
Stundenmittel der Windgeschwindigkeit auf der Münsterspitze und dem Wasserthurm.
Uebersicht über die wichtigsten Jahres-Resultate der Stationen.
Fünftägige (Pentaden-) Mittel der Temperatur.

---

1) **Jahrbuch der Meteorologischen Beobachtungen der Wetterwarte der „Magdeburgischen Zeitung“**, Band XV, Jahrgang XVI, 1896.

Vorwort.
Terminbeobachtungen. Monats- und Jahres-Resultate. Fünftägige Wärmemittel. Tagesmittel der Temperatur in 2 m Höhe.
Stündliche Aufzeichnungen der autographischen Apparate für Luftdruck, Windrichtung nnd Windgeschwindigkeit. Mittelwerthe des Luftdrucks.
Continuirliche Registrirungen des Sonnenscheins.
Temperaturen des Erdbodens in 5 m, 3 m, 1 m, 0.15 m, 0.05 m und 0.00 m Tiefe.
Tägliche Temperatur-Extreme der untersten Luftschicht und der Oberfläche des Erdbodens, beobachtet an 3 Minimum- und 1 Maximum-Thermometer.
Tägliche Beobachtungen der höchsten Insolationswärme.
Verdunstungshöhe, beobachtet am Wild'schen Verdunstungsmesser.
Grundwasserstand.

Anhang.

Photographische Reproduktion sämmtlicher Barographen-Curven (½ verkleinert).
Sonnenscheindauer in Stunden von 1882—1896.
15jährige Mittelwerthe.

2) **Deutsches Meteorologisches Jahrbuch der Freien u. Hansestadt Bremen für 1896** (VII. Jahrgang), herausgegeben von Dr. Paul Bergholz.

Text.
Jahresbericht.
Reduktion der Barometerstände auf das Meeresniveau und auf Normalschwere.
Die Regenstationen.
Phänologische Beobachtungen.
Verzeichniss der Behörden, Institute etc., an welche das Jahrbuch verschickt wird.

Tabellen.
- I. Stündliche Aufzeichnungen der Registrirapparate für Luftdruck, Wind, Temperatur, Feuchtigkeit, Niederschlag und Sonnenschein.
  Interdiurne Veränderlichkeit des Luftdrucks und der Temperatur.
  Monats- und Jahres-Uebersichten zu den Aufzeichnungen der Registrir-Apparate.
- II. Terminbeobachtungen.
- III. Die Regenstationen.
- IV. Nachträge.
  1) Monats-, Jahreszeiten- und Jahresmittel der interdiurnen Veränderlichkeit des Luftdruckes 1891—1895.
  2) Interdiurne Veränderlichkeit des Luftdrucks 1891—1895.

Berichtigungen und Druckfehler-Verzeichniss.

3) **XVI. Jahresbericht der Meteorologischen Station des Kurvereins zu Wiesbaden** für das Jahr 1896/97.

Allgemeine Charakteristik des Jahres, der Verlauf der Wärme und des Luftdrucks; die Winde, Bewölkung, Niederschläge und relative Feuchtigkeit.
Je eine Tafel mit graphischer Darstellung des Ganges von Luftdruck (täglich 3 Beobachtungen) und Temperatur (Maximum, Mittel und Minimum) von Tag zu Tag.
Tafeln mit graphischer Darstellung des Rheinspiegels, gemessen am amtlichen Pegel zu Mainz in den Jahren 1891/96.

4) **Jahresbericht des Physikalischen Vereins zu Frankfurt a. M.** für das Rechnungsjahr 1895/96.

Das Klima von Frankfurt a. M. Kurzer Auszug aus der gleichnamigen Schrift von Dr. J. Ziegler und Prof. Dr. König.
Die Witterung des Jahres 1896.
Dreimaltägliche Beobachtungen zu Frankfurt a. M. im Jahre 1896, nebst Jahres-Uebersicht.
Monats- und Jahressummen der Niederschläge an 38 Regenstationen in der Umgebung von Frankfurt a. M. im Jahre 1896.
Vegetationszeiten zu Frankfurt a. M. im Jahre 1896.
Tabelle der Grundwasser-Schwankungen zu Frankfurt a. M. im Jahre 1896.
2 Tafeln mit graphischer Darstellung des Verlaufs des täglichen mittleren Luftdrucks, der täglichen mittleren Lufttemperatur und der monatlichen Höhe der atmosphärischen Niederschläge zu Frankfurt a. M. im Jahre 1896.

5) **Ergebnisse der meteorologischen Beobachtungen an der Station I. Ordnung Aachen und deren Nebenstationen im Jahre 1896** (II. Jahrgang), herausgegeben im Auftrage der Stadtverwaltung von P. Polis, Direktor.

Text.
Vorwort.
Allgemeines: Einleitung. Erweiterung des Stationsnetzes. Bericht über die Thätigkeit im Jahre 1896. Bemerkungen zu den Tabellen und Ergebnissen der Beobachtungen. Aachen und Wiesbaden, eine klimatische Skizze.
Wissenschaftliche Arbeiten: P. Polis, Ueber die tägliche Periode des Wolkenzuges und der Windrichtung. P. Polis, Das Klima von Aachen, I. Theil, »Niederschläge«. A. Sieberg, Untersuchung über die tägliche Periode der Lufttemperatur in Aachen-Stadt und Wald an heiteren und an trüben Tagen.

Tabellen.
- I. Terminbeobachtungen.
  Tägliche Beobachtungen.
  Monats- und Jahresübersicht. — Obligatorische Beobachtungen. Fakultative Beobachtungen. Ergänzende Niederschlagstabellen: an der Hauptstation in 19 m Höhe, Gasanstalt, Vaelserstrasse, Waldstation und Brandenburg.

Nachtrag

zum Gesammtinhalt des deutschen meteorologischen Jahrbuchs für 1895.

Ergebnisse der meteorologischen Beobachtungen an der Station I. Ordnung Aachen und deren Nebenstationen im Jahre 1895 (I. Jahrgang), herausgegeben im Auftrage der Stadtverwaltung von P. Polis, Vorsteher der meteorolog. Station Aachen.
